Mobile Relay Associates
Form 601
July, 2013

**FREQUENCY COORDINATOR STATEMENT
REGARDING COORDINATION**

Forest Industries Telecommunications ("FIT"), the Commission-approved frequency coordinator with respect to this application by Mobile Relay Associates ("MRA"), hereby submits this statement explaining why FIT did not coordinate this application, but is forwarding the application without coordination, serving as the gateway to the Commission. This process is necessary to preserve the integrity of notification requirements among certified frequency coordinators.

FIT can not formally coordinate this application because the four frequencies sought in the application – 462.5375 MHz, 462.7375 MHz, 467.5375 MHz and 467.7375 MHz ("Requested Channels") – are not allocated as Industrial/Business frequencies in Section 90.35 of the Commission's rules. However, FIT agrees that the facts sets forth in the Waiver Request attached to the application are correct, including in particular the following facts:

- (a) The Requested Channels are not otherwise allocated by the Commission, but represent unallocated "buffer" spectrum.
- (b) There is no spectral overlap between the Requested Channels, on the one hand, and the operations of other Commission-regulated users, on the other hand.
- (c) Grant of the MRA application would not cause harmful or objectionable interference to any protected user.
- (d) There is severe congestion and lack of available PMRS spectrum in the metropolitan Los Angeles area.

Accordingly, FIT believes that a grant of MRA's waiver request would otherwise meet the applicable standards for a favorable frequency recommendation and the application is in the public interest and supports the grant of MRA's application.

A handwritten signature in black ink, appearing to read 'David B. Smith', written over a light gray rectangular background.
